

R&D PANEL DISCUSSION COMPLETED SUCCESSFULLY

A large meeting on University-Industry Cooperation and Incentives has been organized by ISKID - University-Industry Cooperation and Scholarship Commission (USIB) on 27th of January 2010, Wednesday between 10:00 and 16:30 hours at The Green Park - Bostancı Hotel. The meeting got an attendance of 65 invitees.

The opening ceremony of the panel was held by ISKID Executive Board Chairman Mr. Nedim Zalma and USIB Commission Chairman Mr. Naci Sahin, and got attended by managers and R&D personnel of İSKİD member companies, academic members from relevant University departments, and representatives of inner and external sector companies. ISKID USIB, TUBITAK MAM, TTGV, TEYDEP, Fiterm, TUSSIDE and Arcelik have made contributions with their speakers.

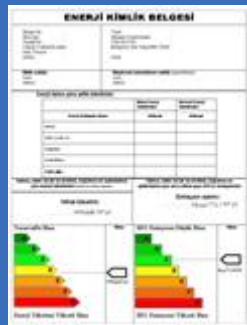

The speakers have enlightened us on topics of R&D Culture and awareness, Universities and Industrial Cooperations, R&D Practices of experienced companies, R&D Organizations, R&D Supports and Incentives, establishments of a Joint Test and Research Centre and governmental contributions for it, R&D Employee profile, and main targets of R&D in order to make the R&D activities sustainable in an efficient and systematic ambient, whose importance is now indisputable in connection with the development of industrial organizations that compose the private sector. In addition, Mr. Erhan Böke has introduced the R&D book published by the ISKID-USIB Commission and submitted it for the utilization of the sector. Please [click](#) for details.

ENERGY PERFORMANCE OF BUILDINGS

Energy resources have started to fall short of the escalating needs of the world during the last century. We can argue that the limited production and the high cost of energy is a big setback for our country in competition with the rest of the world.

Along with industrial plants, one third of the current energy capacity of our country is consumed for building heating purposes. At this point, the energy efficiency should be considered as a whole in terms of buildings, industry, transportation and agricultural sector and solution suggestions should be towards providing productivity increase in all sectors.

Steps must be taken without delay towards efficient use of energy in housing and industry for which we pay a higher price than most of the European countries. When we examine electricity and natural gas prices in the European countries we conclude that Turkey must pay a much greater attention to energy efficiency than the developed countries do. In this connection, the regulation of energy efficiency performances in buildings is pending. Energy report cards shall start to be issued as of 1st of July 2010 following preparations of measurement programs.

These documents will be prepared by an "organization certified to issue energy identity cards" and shall be approved by a relevant administration and contain information like the energy requirements of the building, its energy consumption classifications, its insulation properties and the efficiency of its heating and cooling systems. The energy identity document shall be an "integral part" of the residential usage license for new buildings. Existing buildings will also be required to obtain the same document within 10 years.

05 - 08 MAY 2010 ISK SODEX FAIR IS WAITED IN EXCITEMENT..

The international trade is in a course of very fast progress today, and consequently the importance of fairs grow indispensably. Fairs are grounds where products and latest technologies are displayed which are attained through extremely careful efforts and by great labor. With these features, fairs are mirrors reflecting the economical and social life as well as being indicators of foreign economical relations.

In this connection, the International Heating, Refrigeration, Climatization, Ventilation, Insulation, Pumping, Valves, Installation, Water Treatment, Pools and Solar Energy Systems Fair will be organized between 05th to 08th of May 2010 at the Istanbul Fairs Center - CNR Expo, World Trade Center complex.

ISK-SODEX 2010 fair will be held in 11 halls covering approximately 55.000 m² of net area. To take place in an activity that is being attended by the entire sector would add prestige to your brands. The ISK-SODEX fair of 2008 had 78.243 visitors from 84 countries, 7,560 of them being foreign citizens.

An ISK-SODEX 2010 Implementation Contest will also be organized at the ISK-SODEX 2010 fair in order to carry into practice the heat technique and mechanical installation knowledge of higher school and technical high school students while evaluating and rewarding the projects of the participating students in the fields of energy saving, renewable energy, comfort and hygiene which comply with standards. In the previous organization, award winning students of the ISK-SODEX 2008 Contest, which was organized by ISKAV, DOSIDER, ISKID, IZODER, TTMD and HMSF AS, were given their awards by the Minister of Industry and Commerce, Mr. Zafer Çağlayan, at a ceremony held on 8th of May 2008.

Similar preparations are under way this year as well with the anticipation that there will be a much broader participation this year. Please [click](#) for details

CLIMA 2010 COMES CLOSER

Clima 2010 REHVA 10th World Climatization Congress will be organized between 9th to 12th of May 2010 at Turkey's tourism capital Antalya. As being a full member of REHVA since 1996, TTMD will host the congress.

The theme of the Clima 2010 Congress has been determined as "Sustainable Energy Use in Buildings" and it is targeted that the Congress make contributions to put into practice the latest research and innovation implementations of sustainable energy use in buildings by considering entire installation technologies.

The Congress shall provide a platform for scientists, the construction industry, building owners, consultants, engineers, architects and politicians where they can exchange their knowledge of scientific data and technical solutions.

A large number of international papers will be presented at the Congress. An international "Students' Competition" will be organized during the Congress and a national team will be formed for this purpose. The team will be composed of students of a university which will be elected again by a nationwide contest in the Heating-Refrigeration-Climatization field.

As ISKID, we are in support of the Clima 2010 Congress. Our contribution for Clima 2010 fund is 28.000 TL. On top of this, a project conducted under supervision of Ass. Prof. Dr. Erhan Boke of ITU Mechanical Engineering faculty,

who is also a member of **ISKID-USIB** Commission, has been granted the right to represent our country in the REHVA Clima 2010 World Congress contest.

TREE PLANTATION FOR THE ISKID MEMORIAL FOREST IS COMPLETED

As ISKID, we have completed our tree plantation activities within the borders of Tekirdağ province in connection with the "Memorial Forests Project" in cooperation with TEMA Foundation with the purpose of making our people more sensitive against soil erosion and forest fires through their forestation love. With the widening of forest lands, we aim to create awareness to reduce global warming, to fulfill personal and corporate responsibilities for the environment we all live in.

We maintain our activities targeting to initiate new plantation projects and to raise awareness of selecting the products used in industry among nature friendly companies.
